Seeking a 480-hour OJT placement

Software Development | AI and Data

Education

Mapúa Malayan Colleges Laguna Expected August 2027

Bachelor of Science in Computer Science - Specialization in Machine Learning

Honors: Consistent Dean's Lister

Project Experience

TARA: Travel Assistant and Recommendation Agent for Laguna 2026 – Present

Thesis · Backend & AI developer, team of 4 | TypeScript, Node.js, PostgreSQL, React Native, llama.cpp

- Built "Ask TARA," a streaming assistant on a self-hosted Qwen3-8B model; designed a JSON-grammar intent form so the LLM only interprets requests while code supplies places, prices, and routes.
- Developed a multi-day itinerary planner that schedules around opening hours, meals, and hotels, with driving routes and jeepney/tricycle commute directions.
- Built data imports that cleaned, deduplicated, and loaded Laguna places, foods, products, and transit routes into PostgreSQL/PostGIS, with dry-run checks first.
- Created plan-quality metrics, a batch planner sweep, and an LLM evaluation harness on labeled conversations.
- Hardened the database with integrity migrations and a GitHub Actions pipeline that rebuilds it and runs 35 SQL test suites on every pull request.

MP SAN Tenant Management System 2026

Software Engineering project · ML developer, team of 2 | Python, Django, scikit-learn, React

- Built a data pipeline that rebuilds monthly occupancy from move-in/move-out records and CSV imports, then forecast it with Gradient Boosting against naïve and ETS baselines.
- Engineered 17 payment-behavior features to train a Random Forest that predicts each tenant's best reminder hour, with confidence-gated scheduling.

Leadership and Activities

ACM Codex Workshop 2025

Java Mentor

- Taught Java fundamentals and competitive programming problem-solving to aspiring contest participants.

Junior Philippine Computer Society (JPCS) 2024 - 2026

Auditor, 2025 - 2026; Creatives Head, 2024 - 2025

Association for Computing Machinery (ACM) 2023 - 2025

Research and Development Committee Member

Technical Skills

Languages: Python, TypeScript, JavaScript, Java, SQL, Kotlin, C#

Frameworks: Node.js, Express, React, React Native, Expo, Django

ML & AI: scikit-learn, pandas, statsmodels, llama.cpp (Qwen3), LLM evaluation

Tools & Platforms: PostgreSQL/PostGIS, MySQL, Docker, Git, GitHub Actions

AI Development Tools: Claude Code, Codex, GitHub Copilot, Gemini
